Version**

Lightroom's camera-specific workflows haven't changed much in this release; however, the new option on the Preferences menu for storing the data in TIFF format is a welcome addition, since RAW files are now in TIFF format as well. Overall, the program's import workflows are still the best, and the best workflows are the best, so that's still the program to use. If you shoot JPEG files, you'll enjoy the new file browser, which also works for RAW files. There are new Presets for RAW files and RAW and JPEG files, and the new Brush Options allow you to edit RAW files directly in the software. The most important new tool, however, is the new AI masking feature. This allows you to select a subject in a photo and then let the software apply a preset effect just to that area. Adobe's Lightroom CC, a professional version of the software, is \$9.99 for non-Photoshop subscribers, \$49.99 for Photoshop subscribers,

and \$119 for those on an annual subscription plan. The software allows non-Photoshop subscribers to import, organize, develop, and edit their photos. It is \$99.99 for photographers on an annual subscription plan. The program is available for both Windows and Mac OS. In fact, you don't need to cough up \$49 to get your very own giant Lightroom app, for a limited time. The e-book gets you the software, a free 30-day trial, and access to online coaching and private and group classes. You can join Lightroom Sessions, a social community for photographers that's hosted on Adobe's Creative Cloud. The app is available for download on any Apple device for free. New in Lightroom 6: Create your own templates of actions you use often. The workflow software isn't super-fancy, but it can be very useful for automating tasks, such as dropping a starburst, a vignette, or other effects into an image in just a

few clicks.
