As you import images, there's a smart, powerful slide show that lets you choose which pictures to show next. And right there in the upper-right corner of the status bar, you can see which images have been rearranged and what auto levels the program has applied. Together, the applications provide everything you need to create gorgeous images. Elements is like a toolbox; when you need to do something unique (or exact), you couple it with another tool. On the Elements 14 update, you'll find a new Fill Effects panel, which lets you pop bubbles, call up preset designs and colorize photos—all without having to go into Photoshop. You can even select the kind of effect that you'd like your swirl to have. These can be used anywhere in your image, including a duplicate layer, Memories or a Smart Object. Adobe has also radically simplified the window. The Insights panel that's been collected in the SideBar certainly seems to be lighter, allowing you to quickly access things like the "Most Used Presets," "Go to Smart Objects," and even "Reveal Smart Objects." Adobe's got an ambitious list of language services for the app. There's Spanish, French, Portuguese and Italian, as well as support for direct access to content stored in the cloud, such as content from Flickr, Panoramio and Twitter. Users can also save their Elements open files to Dropbox. On the editing side, one of the biggest new features is the new Selection and Mask tool. This lets you select and apply a filter to a specific part of the photo with no changes to the surrounding areas.
